Order from LC or SLA m\$2.70, ph\$4.80 AEC-tr-4258

Trans. in manuscript of Zhurnal Eksperimental'noy i Teoreticheskoy Fiziki (USSR) 1954, v. 26, p. 300-306.

The dependence of absorption spectra, electrical conductivity and its temperature coefficient as a function of metal concentration in metal-ammonia solutions is explained on the basis of local electronic centers (polarons, color centers and double color centers) in an ionic dielectric. The position of the maximum and the half width of the light absorption band is calculated assuming light absorption is due to polarons. (Author)
